

Dear Canonical Hiring Team,

I am writing to apply for the Python engineering role at Canonical. I am a Computer Science and Engineering student at the Indian Institute of Information Technology, Kottayam, with hands-on experience in Python software development, open-source contribution, distributed systems, automated testing, Linux, Kubernetes, and cloud-native engineering.

My open-source work has given me direct experience contributing to production-oriented software and working through rigorous review processes. In Apache SeaTunnel, I worked on a critical MySQL CDC issue involving data skew, checkpoint timeouts, and stalled snapshot tasks. I redesigned the chunk-splitting logic to handle sparse primary-key ranges and improve workload distribution across parallel CDC readers, while also developing unit and boundary-correctness tests and participating in multiple rounds of Apache Software Foundation code review. I have also contributed to QuantumLib/qsim, where I developed integration tests, investigated GPU execution and memory constraints, validated 64-bit indexing, and strengthened CI validation for large-scale simulations.

Beyond open-source contributions, I have built Python-based engineering projects involving Kubernetes, Docker, Terraform, FastAPI, CI/CD, monitoring, and automated validation. These projects have strengthened my experience in designing maintainable software, testing APIs and deployment workflows, debugging runtime issues, and building systems with observability and reliability in mind.

I am particularly interested in Canonical because of its deep commitment to open-source software, Linux, engineering quality, and globally distributed collaboration. The opportunity to contribute to software used across Ubuntu, cloud infrastructure, and large-scale technology environments strongly aligns with the kind of engineering work I want to pursue. I would be excited to contribute not only through code, but also through testing, documentation, debugging, and active participation in the open-source community.

Thank you for considering my application. I would welcome the opportunity to contribute my Python, Linux, cloud-native, testing, and open-source experience to Canonical.

Sincerely,

SUNOJ RAGIRI
